

### Example Cutout for 1,5mm/3mm Panel Material thickness

Info: These IECs are made for 1mm Material thickness.  
 As they're the "snap in version" the cutout needs a 2,1mm deep plane surface so that the IEC sits into the panel.  
 (there are 3mm IECs on the market but they will not fit into a 3mm panel + powder coating on top)  
 So this is a good solution for fixing the IEC without wiggling around.

### FRONT VIEW

Don't forget to add a fuse ;-)

### REAR VIEW
